Cooperating with

**U.S. Department of Agriculture  
Agricultural Marketing Service  
and  
National Agricultural Statistics Service**

### **ACKNOWLEDGMENT**

The acreage, production, utilization, monthly and season average price, and crop value statistics for Florida as shown in this summary are official estimates of the Florida Agricultural Statistics Service. Corresponding data for other citrus states are from official reports of the USDA, National Agricultural Statistics Service. Canned and frozen pack statistics were compiled by the Florida Citrus Processors Association. Where data are from other sources, appropriate references appear.

Records of the Division of Fruit and Vegetable Inspection, Florida Department of Agriculture and Consumer Services, were used in preparing production and utilization estimates. The Citrus Administrative Committee assisted in assembling these data.

Many producers, shippers, processors, sales agencies, transportation firms, and others associated with the citrus industry voluntarily supplied basic data used to develop these statistics. Their contributions are sincerely appreciated.

This report was assembled under the direction of Robert R. Terry, Candice T. Erick, and Elise E. Leiphart of the Florida Agricultural Statistics Service.

**FLORIDA WEATHER HIGHLIGHTS, SELECTED AREAS, AND MONTHS,  
1992-93**

The 1992-93 season weather was often near ideal except for rainfall during some of 1993. Trees were in excellent condition as bloom buds formed. Cool nighttime temperatures in March 1992 prolonged the bloom period.

Spring rains in April resulted in abundant new growth. Dry conditions, coupled with warm daytime temperatures in May caused stress in some trees.

June brought heavy rains and adequate subsurface soil moisture. Tree condition improved allowing new growth as the fruit progressed. More heavy rains arrived at the end of the month. With summer came hot weather (record and near record high temperatures) and afternoon rains. Trees were in near excellent condition.

In August, citrus was spared the devastating effects of Hurricane Andrew as it passed over the south Florida lime and avocado growing region. Rainfall was near normal in September and there was an abundance of new growth on the trees.

October began as a wet month and had above average rainfall. Lakes and ponds were replenished and levels were the highest in recent years. New growth slowed as nighttime temperatures cooled. November recorded rainfall above normal. Some areas were wet and soggy but the well-drained high sand hill groves had very few moisture problems.

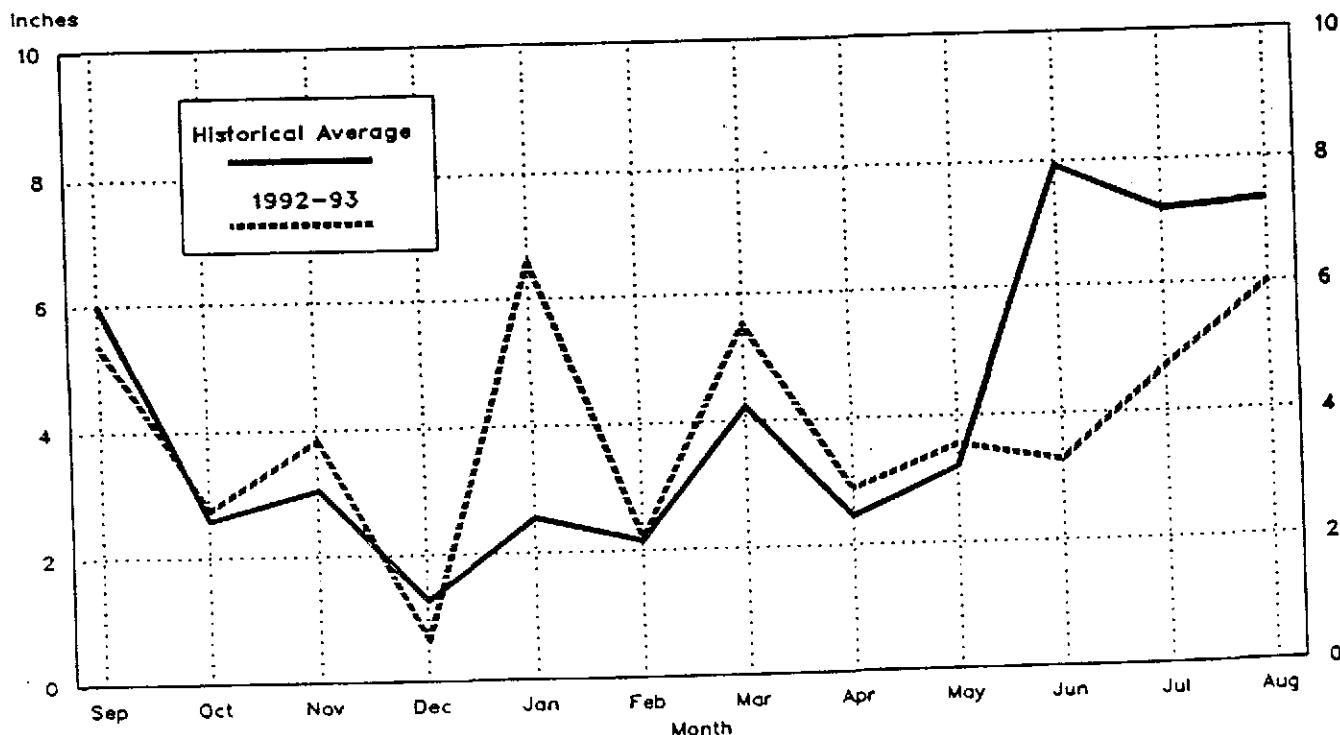

Trees and fruit began winter in near excellent condition. Temperatures dropped to the mid-30's on several mornings. The low temperatures slowed tree growth. Irrigation was used to maintain tree condition during a dry December. January 1993 was noted for unseasonably mild days and heavy mid-month rains which covered the citrus belt. Temperatures were almost ideal for pickers and grove workers.

By February, cooler weather had returned. Rain was adequate as the bloom buds were forming. A fast moving storm with high winds caused limited fruit dropage in March. The lower East Coast was very wet.

The weather grew sunny and warmer by the end of April. Rain was lacking until late in the month of May. Trees had returned to very good condition by June but development was slowed by hot and dry conditions. Late June summer rains helped but rainfall was still well below average. The season was nearing completion although harvest trickled on into July.

In the chart below, the 1992-93 monthly rainfall is compared to the historical average which includes data from two stations in each of the citrus producing areas. The ten stations are: Avon Park, Clermont, Clewiston (AG), Immokalee, Lake Alfred, Orlando, Plant City, Ruskin, Stuart, and Vero Beach (4W).

**FLORIDA PRECIPITATION: Average monthly rainfall, ten selected stations,  
1984-85 through 1991-92 and 1992-93**

## 1992-93 PRODUCTION AND TREE CENSUS

### PRODUCTION

Florida citrus rebounded dramatically in the 1992-93 season with production of all varieties totaling 251.4 million boxes. This was the third largest crop and the most since the record harvest of nearly 284 million boxes in 1979-80. Production was 31 percent above the previous year, largely reflecting a low fruit set in 1991-92 and the increasing number and productivity of young bearing trees.

Orange production at 186.5 million boxes is up 33 percent. Included in the total are 4.8 million boxes of Navel, which surpass the record of the past two seasons by 1.1 million boxes.

Harvested grapefruit reached a record 55.15 million boxes with the colored varieties contributing a record 27.7 million boxes to the total. Seedy grapefruit increased to 1.75 million boxes and white seedless grapefruit was up to 25.7 million boxes.

Early tangerine production has increased as more of the Sunburst trees reach bearing age. Production of the other specialty varieties was also up except for Dancy tangerines, lemons, and limes. Lime production was reduced by Hurricane Andrew in August 1992, with minimal shipments after the storm.

The FCOJ final yields for the first non-factored season were at or near record levels. Setting records were the early and midseason oranges at 1.52480 and all oranges at 1.57893 gallons per box. The late type (Valencia) portion of the crop at 1.68686 gallons per box nearly equaled the previous season's record.

California's total orange production showed a small gain. The 25 percent increase in the Navel portion was offset by a 23 percent decrease in the Valencia crop. Grapefruit production in the Desert Valley held steady at 3.5 million boxes for the fifth season in a row. However, production in the other areas was down 500,000 boxes.

Arizona's production of citrus was down over twenty percent from the previous season. The orange crop decreased to 1,850,000 boxes and the grapefruit totaled 2,150,000 boxes.

Texas continued to rebound from the 1989 freeze with tremendous increases in production. The orange harvest was 510,000 boxes and grapefruit production rose to 1,875,000 boxes.

### CITRUS BOX WEIGHTS: Approximate net weight in pounds by fruit type and states

States	Oranges	Grape-fruit	Tan-gerines	Lemons	Limes
FL	90 <sup>1</sup>	85	95	90	88
CA	75	65	75	76	--
TX	85	80	--	--	--
AZ	75	64	75	76	--

<sup>1</sup> Includes Temples and tangelos at 90 lbs.

### TREE CENSUS

The Florida Agricultural Statistics Service first indexed the State's commercial citrus groves on aerial photography as of January 1966. Ground crews identify all the State's groves by fruit type, row spacing, and year in which set. Photo interpreters in the Orlando office then delineate the groves by variety blocks on photo transparencies at a scale of 1 inch to 660 feet. Variety blocks are measured with planimeters to obtain acreage and then indexed by land section.

The design of the inventory survey allows for quick and economical updating. Since 1966, the citrus belt has been resurveyed each second winter (1968 through 1992) to determine changes. Photographing begins in November when weather conditions are most favorable and is generally completed in 80 to 90 days. The same three-mile-wide flight lines established in 1966 are photographed on each succeeding flight. Approximately 14,000 square miles of photography are obtained at a 1 to 30,000 scale.

The last statewide survey was conducted as of January 1992. Through 1991, all types of citrus planted totaled 791,290 acres, up 8 percent from the 732,767 acres recorded in January 1990. Increases were highest in lower interior counties. The Northern Area showed recovery from the 1989 freeze as acreage increased by one-third. Acreage by counties and types is shown on page 27.

Photography for the next survey began November 1993, and field work will update the acreage records as of January 1994.

### FLORIDA, ALL CITRUS: Acres in commercial groves as of January 1966-1992, with percent changes

Year	Acres	Percent change from	
		Previous survey	1966 survey
1966	858,082	--	--
1968	931,249	+8.5	+8.5
1970	941,471	+1.1	+9.7
1972	878,019	-6.7	+2.3
1974	864,098	-1.6	+0.7
1976	852,369	-1.4	-0.7
1978	831,235	-2.5	-3.1
1980	845,283	+1.7	-1.5
1982	847,856	+0.3	-1.2
1984	761,365	-10.2	-11.3
1986	624,492	-18.0	-27.2
1988	697,929	+11.8	-18.7
1990	732,767	+5.0	-14.6
1992	791,290	+8.0	-7.8

## 1992-93 VALUE OF SALES, PRICES, AND EXPORTS

### VALUE

The preliminary on-tree value of all citrus for the 1992-93 season is \$695 million, down 43 percent from last season's revised \$1.209 billion. The record high 1987-88 season value was \$1.443 billion.

Preliminary value is based on that part of the crop priced at harvest, which amounts to all of the fresh fruit and about 41 percent of the processed. When all participation plans and cooperative pools are finalized, a revised value will be calculated.

Preliminary orange on-tree prices are down from a revised \$5.93 in 1991-92 to \$2.67 this season. Fresh and processed fruit returns were down to less than half of the previous season's.

Grapefruit prices were down substantially for seedy and seedless varieties. Processed fruit was affected more than the fresh.

Both fresh and processed prices for Temples, tangelos, limes, lemons, and all tangerine varieties decreased. Only the fresh K-Early Citrus price showed an increase over the revised 1991-92 price.

The season average delivered-in price of fruit going into FCOJ as reported by the Florida Citrus Processors Association is \$4.45 per box or \$0.68 per pound of solids. Early-mids averaged \$4.05 per box or \$0.64 per pound of solids and late oranges averaged \$5.19 per box and \$0.74 per pound.

### FLORIDA, ALL CITRUS: Value of sales on-tree, crop years 1983-84 through 1992-93

Crop year	Value 1,000 dol.	Crop Year	Value 1,000 dol.
1983-84	849,457	1988-89	1,429,808
1984-85	984,820	1989-90	952,303
1985-86	725,035	1990-91	1,236,126
1986-87	941,078	1991-92 <sup>1/</sup>	1,208,944
1987-88	1,443,116	1992-93 <sup>2/</sup>	694,695

<sup>1/</sup> Revised. <sup>2/</sup> Preliminary.

### FOREIGN EXPORTS

Fresh fruit exports totaled 23,376,000 4/5 bushel cartons, down slightly from last season. Canada accounts for the most receipts of Florida oranges and specialty fruit while Japan receives the most grapefruit.

A total of 14.5 million gallons of FCGJ were exported, mostly to Canada. There were also 5.1 million gallons of FCGJ exported.

### PRICES

All on-tree prices represent the average price received by growers for their fruit by types. Prices are based on records of commercial fresh fruit sales and processed fruit returns. The term "on-tree" relates to fruit returns to the grower after the costs of picking, hauling, and packing have been removed.

Each season, beginning with the first month that three percent of a fruit type is harvested, monthly estimates are computed. Reports from fresh fruit sales organizations and from packers provide data for an average f.o.b. price. Processors report an average spot and cash price for fruit delivered to their plants. From these values, an estimated charge for picking, hauling, and packing is deducted to arrive at an on-tree price. The anticipated box utilization for the month is used to combine the fresh and processing price to obtain an average price for all methods of sales. At the end of the season, monthly price averages are computed and weighted by boxes utilized, to provide the preliminary season average price.

A year later, after most processed products are sold, cooperatives and firms with participating plans report prices of fruit they handled. These prices, combined with the spot and cash prices collected earlier, are weighted together by varieties to determine the final processing price received by growers. From this price, charges for picking, hauling, and packing, as estimated by University of Florida economists, are deducted to arrive at the final on-tree price received by growers.

### COUNTY PRODUCTION

Estimates of citrus production by counties were prepared using objective survey data obtained from the citrus crop estimates program. Production for Florida has been distributed to counties based on the biennial citrus tree census, limb count survey data adjusted for droppage to end of season, and size data at maturity.

Tree numbers by county which are used in the estimates were obtained from the latest tree census. Productivity per tree is obtained from several objective fruit surveys including limb count, size, and droppage. Because of the statistical sampling design, counties with higher production in general have a greater number of samples and, therefore, estimates for these counties can be considered more reliable. Thus, for the same reason, estimates for the production areas are more reliable than for the individual counties.

**FLORIDA CITRUS: Production of all citrus since 1886-87**

Crop year	Type of fruit				Crop year	Type of fruit

#### HISTORY OF FLORIDA'S CITRUS INDUSTRY

The citrus tree is a native of the Orient. From there it was carried ever westward by man, to India, to the Mediterranean, and on across the Atlantic. Citrus was brought to the Americas by Columbus. When he landed on November 22, 1493, he brought citrus seeds that were planted on the island of Haiti. The first seeds planted on the mainland of the Americas were brought by the expedition of Juan de Grijalva when he landed in Central America between July 12 and July 20, 1518. The exact date of the introduction of citrus trees into Florida is not known, but from a statement made by Pedro Medendez, dated April 2, 1579, it appears that citrus fruits were grown in abundance around St. Augustine at that time. Early settlers in Florida some two centuries later found wild citrus trees scattered over the State. One of the oldest cultivated groves planted in Florida (Hume, 1926 p.95) is thought to have been the Don Phillippe grove in Pinellas County, planted sometime between 1809 and 1820.

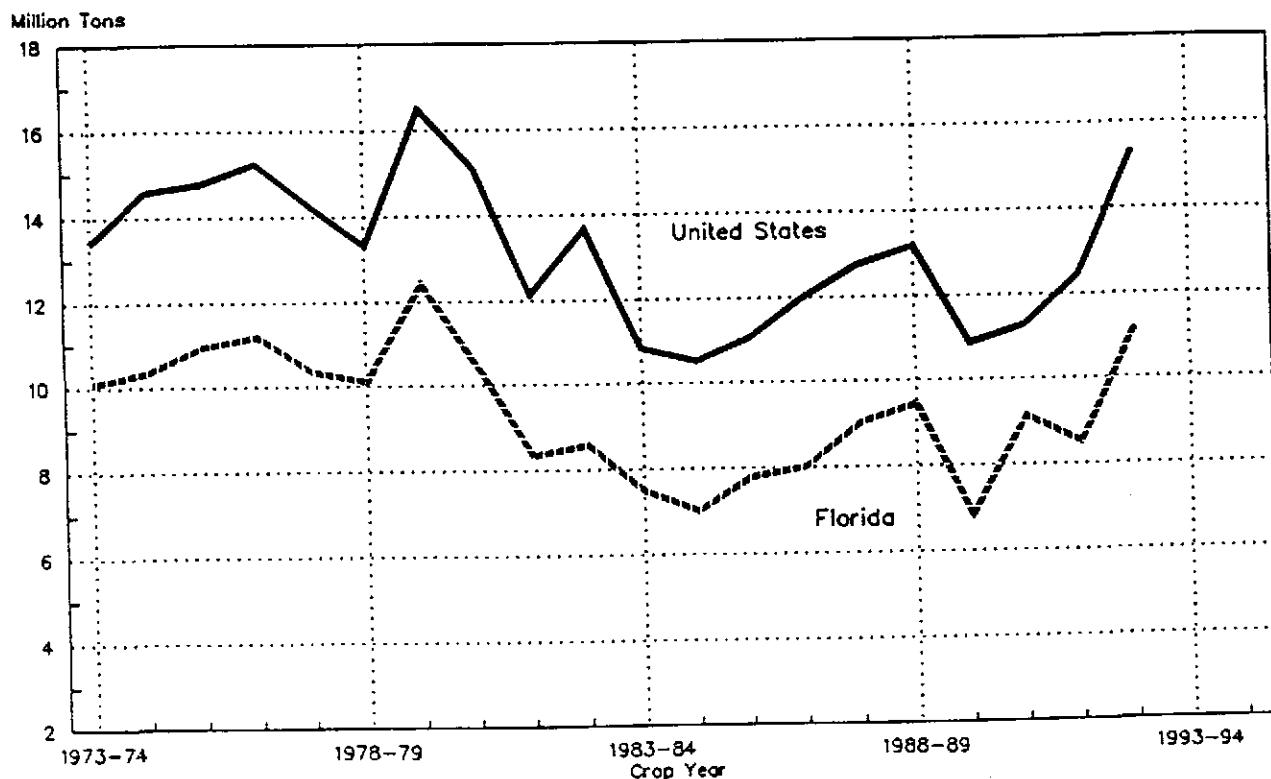

Citrus production in Florida had reached an all time high of more than 5 million boxes when the Great Freeze of 1894-95 almost totally wiped out the citrus industry. It was not until 1909-10 that this level was reached again. In 1992-93, Florida had 73 percent of the Nation's production.

1/ Beginning with 1989-90, includes shipments to Canada and Mexico. 2/ August shipments 1990-91 season.

SOURCE: See Page 45, Data Sources, Item 5.

Footnote 3/ for page 32, 3/ for page 33, and 2/ for page 34. Final Mexican shipments to the U.S. are reported by FAS as a combined total for oranges and tangerines. The totals shown on pages 32 through 34 have been broken down proportionally into oranges and tangerines from Plant Quarantine data reported at the time of the crossing. Plant Quarantine releases give separate totals for these two types of citrus. Mexican shipments through the U.S. to Canada are not included.

CITRUS: U.S. fresh exports, by months, 1992-93

Total	6,328	5,944	6,029	5,922	6,041

1/ Forecast. 2/ One metric ton is equivalent to 2,204.6 pounds. 3/ Includes tangerines and Temples in some countries.  
 4/ U.S. export data adjusted based on import data from Statistics Canada. 5/ Includes some fruit produced in Swaziland, Botswana, Mozambique, and Zimbabwe which is marketed through the South African Citrus board. 6/ Tangerine production is small and is included with oranges. 7/ Mainly satsumas (also called mandarin or unshu mikan), but also including madarin hybrids. 8/ State of Sao Paulo only, which apparently accounts for over one-half of Brazil's production. About 120,000 tons of tangerines which are processed are included in the orange table. 9/Includes tangelos, which account for about half of the total production. 10/ Clementines only.
